Exact shape editing, the use of shape primitives such as knots, rectangular patches, tubes, round parts and segments as well as any combination of these shapes can be done very easily. This shape editing allows the user to assemble curved or plane surfaces directly on point clouds or meshes from other sources. VRMesh Studio solves all kinds of problems regarding point clouds or meshes such as seamless surface joinings, point cloud to mesh conversion, as well as point cloud operations such as rotations, flips and edge-flips and mesh operations such as smoothing, splitting, joining, decimation, edge collapse, closed mesh generation, etc. Objects can be colored with a variety of colors, even for closed meshes. Object coloring for meshes is also available. * Connectivity * Mesh Editing * Decimation and Mesh Clipping * Coordinate Transformation * Scene Management * Clean-Up * Points, Lines and Curves * Polygons * Tubes * Knots * Round Parts * Segments * Parts for 2D Fitting * Surface Triangulation * 2D Fitting * 2D Extraction * Bounding Boxes * Slicing * Compressed Meshes * Point Cloud to Meshes * Import/Export of OBJ and STL Files * Point Cloud from Webcam * Vertex Clipping * Decimation * Edit Sequence * Sequence Import * Segment-Linking * Vertices and edges are splitted if necessary * Groups can be renamed * Reverse interpolation, and interpolation between all previous point clouds * Spline fitting * Merge Splines into a Curve * Extract Splines from an Existing Curve * Extract All Splines from a Point Cloud * Batch Spline Extraction * Composition * Perspective-Camera * Orthographic Projection * Auto-Panning * Projection Clipping * Extrusion * Viewer * Dimensions and Pixels * Scene Support * Inport/Export of Scene Files * Background-Adjustment * Mapping for Scene-Files * Multiple point clouds * XYZ-Data * XZ-Data * XYZ- and XZ-Data at the same time * Change of Viewpoint * Mouse Support * Lines * Splines * Spline Interpolation * Spline Editing * Loop-Control 1d6a3396d6
