It allows you to make changes to each pixel layer making the artwork on the file. The three levels of editing appear in each layer. You can choose a replace or an erase your changes to every layer. The photoshop makes a new layer for that color of the change and changes it and you can indicate where you want to apply the change such as the direction of image. element to the bottom of the image to serve as the underlying color. With a mouse, you can move the tool or eraser on any layer at any time. You can perform the changes to any layer at any time. The image grids are important to make sure the image is how you want it. You can also undo a mistake you've already created.
