Adversarial feedback is the lowest form of peer review. While this makes sense at a user-training level, at the design or engineering level, it's a wash. It doesn't make sense to provide two perspectives on the same problem. For instance, a technical illustration created by a designer needs to be reviewed by someone in a non-technical role, as well as engineers. And both users won't always agree with the designer's creative choices, so designers will sometimes feel defensive. Adobe's Share for Review feature takes the sting out of total disagreement by allowing different stakeholders to comment on an image simultaneously. Instead of telling users they disagree with the design, Photoshop CC 2017 lets them offer feedback on how you could make the design better.
